# Header and Sidebar

## **Header**

- McGill red (#ED1B2F)
- Elements are clickable and link to appropriate places

## **Sidebar**

- The sidebar will be replaced by a hamburger when the screen is small enough.
- The sidebar should hover above the content.
- The sidebar should move with transitions

# Content Box

- Rounded-edge box, no overflow
- Top of box static div: **path and description**
  - Back button leads back to menu
- 2<sup>nd</sup> div contains the actual content, no overflow. Is flexbox.
  - All content elements should take up the entire width (its container, not the element itself). i.e. no 2 elements side by side.

# Random

- Buttons should send alert of success / failure using asynchronous calls
- Every database query:
  - AJAX async call to query\_name.php
    - query\_name.php uses shell to run query\_name.py
      - query\_name.py does SQL and outputs results
    - query\_name.php gets the output and formats it in HTML
    - query\_name.php outputs formatted HTML
  - AJAX async call over: replace some div with output content.
